

2 Disc Reversible Plough

GREENKING 2 Disc Automatic Disc Plough is a unique implement, which is directly mounted to the tractor. This is a hydraulically operated basic implement for preparation of land. It is very useful in hard and dry trashy stumpy land condition and in soil where scouring is a problem. Heavy-duty clearance allows the plough to operate under heavy crop residual. This plough works on both the left and right side and automatically reverses the position while ploughing hence less time & diesel consumption. This plough is more suitable for big pieces of land.
