

Disc Ridger 1 Row

The Disc Ridger consists of heavy duty tubular box frame, hitch system and discs. It is used for making irrigation banks of up to 500 - 600 mm height and 600 - 800 mm width for effective control of flood irrigation or bunds of the size and shape to match crop and soil conditions. The Discs are adjustable along the frame to vary band width and height. Even the disc angle is adjustable.
